

SG1J

29 AUG 86

SESSION SUMMARY

MORNING

SITE I (Mountain in desert)

.... don't remember much about this site....
still having some difficulty distinguishing between
natural and man-made features on this one

SITE II (Island of Bermuda)

.... impression of enclosed body of water at the
foot of a mountain peak.... the oblong circle in
the ideogram could have represented the island.

SITE III (Waterfall in South America)

..... feeling of vertical, up dominated this session....
vertical up, flat, across. Then the signal changed
to downward, in motion, and the feeling changed
from hard to liquid.

OVERALL: Lots of noise today, confidence way down....
had very difficult time trying to overcome the noise
.... getting into heavy conversation during breaks
doesn't help the noise level either.
